

Grain Terminal Repairs

PROJECT DETAILS

Centrals have been engaged by CBH to carry out remedial works to the Kwinana Storage Terminal. These works require extensive concrete repairs and installation of a new 1300m² silo roof membrane, re-levelling and grouting of the grain conveyor trestles, repair and replacement of 12,000m² internal floor screeds and over 1500m² of joint sealing. Largerst project in the southern hemisphere using Parchem Aegis Fine.

In addition to the remedial scope, the project also includes the application of protective coatings to all external fire escapes and structural steel.
